

Introduction:

- Recent events have brought this issue a lot of attention.
- Media consumption via the internet is higher than ever.

Research:

- How to use technology to automate the process of extracting relevant information from online news articles and also analyze this information.
- Stanford Natural Language Processing Group, Word2Vec, Scikit-Learn, Natural Language Toolkit, Beautiful Soup, Django Rest Framework.

Idea:

- Evaluate news articles based not only on the content of the article, but also the sources from which it comes from.

Findings/Next Steps:

- Intuitive application for non-technical users.
- Open source information which enables technical users to utilize data to do their own research and further analysis.
- Create a framework for verifying the web.
