**Methodology**

Conducted a three-part study through Amazon Mechanical Turk
- Social media usage is operationalized as engagement with smartphones social media apps
- Attentional capacity is operationalized as performance on CNS Vital Signs

**Obstacles**
- Transitioning from an in-person study to online format
  - More efficiency, less control
  - Disjointed study experience

**Ideas**

Is there a correlation between social media usage and attentional capacity?
- Focused attention - detection
- Sustained attention - concentration
- Selective attention - filtering
- Alternating attention - switching
- Divided attention - multitasking

**Findings & Next Steps**

- TBD!
- Please visit auditingattention.tumblr.com for updates and more info

**Limitations**

- Small sample size
